

Meeting Minutes – 2/12 4:00pm EGR 104a

Attendance

Alex Kahn
Jesus Garcia
Tyler Mitchell
Ana Steinmacher
Taylor Walker

Upcoming Due Dates

Design Document Final - due 2/15
Peer Evals 1 - due 2/15

Agenda

Weekly Task Report
Demo Tasks

Minutes

Returned Design Doc Draft

Implementation Overview

Too long - explaining too much stuff here, Should explain how we use them instead of why

Like how MongoDB connects to software, or how ReactJS ties in instead of why we use it. Focus on what kinds of information are coming through these pieces of tech

Figure 3

React System box encapsulates too much, split into separate system functions

X *Diagram symbols*

Make sure symbols are consistent throughout the document

X *Figure 4.11*

Should be just for students, OR change and add a 4.0 section for shared functionalities

X *Shared stuff*

Separate all shared functions into a first section in #4

System section

Functions there don't really belong, make sure those functions are correct.

QUESTION: Image postings sent to specific tutor or posted to multiple????

In function figures

There is no mention for technologies, need to show where these are happening

These figures are too high level

Maybe add fields for each object created that interacts with the techs.

Update Gantt Chart to properly fit our schedule

OKAY TO TURN THIS IN ON MONDAY NEXT MEETING

Task Report

Jesus doing bounce functions for AWS

If email isn't received correctly, then system bounces it, to figure out where to send it? Implementing functions and servers to catch these bad sends, then where to send afterward. Also contacted AWS support to get our server out of sandbox. Will add more information to image uploads as well, clean up video uploads to specifications, reforming AWS stuff to make it clean. Working on price projections for AWS for Rob.

Alex work on user profiles

Profiles now have school choices and class list choices. These are persisted and can be changed. Will now work on Paypal and payment options. Also need to start implementing Class list Update Page so existing profiles can access and update their classes.

Tyler

Has redirecting to other pages working and established a mongo connections. Now will start implementing profile updates for user data and user profile permissions to display different pages.

Taylor worked on Design Document. Will be updating it for turn in this week.

Assigned Tasks

Need to refine our project tasks to do from this point on
Design Document Final Draft due Next Monday 2/19

Project Decisions

N/A

Notes
